

# Where should you park?

Moveable bollards

Do not park on the black asphalt portion of the roadway.

The new King Street uses custom, moveable bollards to provide more flexibility for on-street parking, depending on the season.

During the summer, the bollards can be moved to the edge of the road to create more space on the sidewalk for outdoor cafes, patios and restaurant seating. In the winter, the bollards can be moved closer to the buildings or removed completely to create more on-street parking spaces.

So while it may feel a bit different at first, if the bollards are not placed near the road (as pictured above), please park on the sidewalk. We won't be angry.
